

Партиципирование в GP

Цель

Научиться создавать партицированные таблицы.

Типы партиционирования

- 1 Range
- 2 List
- 3 Hash
- 4 Composite

Создание Range Partitioned Table

```
CREATE TABLE sales(  
    sale_id SERIAL,  
    sale_date DATE,  
    amount DECIMAL  
) PARTITION BY RANGE (sale_date);
```

```
CREATE TABLE sales_p1
```

```
PARTITION OF sales FOR VALUES FROM ('2023-01-01') TO ('2023-06-30');
```

Создание List Partitioned Table

```
CREATE TABLE orders (  
    order_id SERIAL,  
    product_category TEXT,  
    order_date DATE  
)  
PARTITION BY LIST (product_category);
```

```
CREATE TABLE orders_p1  
PARTITION OF orders FOR VALUES IN ('Electronics', 'Clothing');
```

Создание Hash Partitioned Table

```
CREATE TABLE sensor_data (  
    sensor_id SERIAL PRIMARY KEY,  
    timestamp TIMESTAMP,  
    reading FLOAT)  
PARTITION BY HASH (sensor_id);
```

```
CREATE TABLE sensor_data_p1
```

```
PARTITION OF sensor_data FOR VALUES WITH (MODULUS 4,  
REMAINDER 0);
```

Создание Composite Partitioned Table

```
CREATE TABLE logs (  
    log_id SERIAL,  
    log_date DATE,  
    log_type TEXT  
)  
DISTRIBUTED BY (log_id)  
PARTITION BY RANGE (log_date) SUBPARTITION BY LIST (log_type);  
  
CREATE TABLE logs_p1  
PARTITION OF logs FOR VALUES FROM ('2023-01-01') TO ('2023-03-31')  
PARTITION BY LIST (log_type);
```

Итог

Научились создавать партицированные таблицы.
